

Verified Vulnerability Intelligence Covering All Systems

Manage your software vulnerabilities with verified, accurate and comprehensive intelligence from Secunia Research to you on time, every time

Benefits to

Your Organization:

- Secunia Research, analyze hundreds of possible vulnerabilities every day. They test, identify and report on the real vulnerabilities.
- Secunia Advisories were developed to support the work of security practitioners to secure businesses. They provide detailed, standardized information on vulnerabilities on applications and systems to enable risk assessment and prioritization of mitigation efforts.
- Our customers receive vulnerability intelligence for all assets within their organizations. They can be confident that we will track any commercially available applications or system in their infrastructure for vulnerabilities.
- We entirely support the processes related to software vulnerability management. That means organizations are equipped to fully leverage the vulnerability intelligence provided by Secunia Research to efficiently act on the vulnerabilities that are a threat for their businesses.

Vulnerability Intelligence Management

Vulnerability Intelligence Manager is a powerful Software Vulnerability Management solution that provides you with the necessary information to analyze vulnerabilities in your IT infrastructure, enabling you to track and eliminate them easily from a centralized dashboard interface. Vulnerability Intelligence Manager is power-packed with rich features and a friendly and lightning fast user interface. It is extremely customizable, enabling organizations to find the latest vulnerability intelligence immediately, and implement remediation strategies more effectively.

What's in Vulnerability Intelligence Manager?

Verified intelligence: Secunia Research analyzes hundreds of potential vulnerabilities every day and releases advisories for verified vulnerabilities, containing detailed information used by customers to assess risk and determine actions to keep their business protected from cybercriminals and hackers.

Secunia Advisories are the result of the expert work from Secunia Research. Covering applications and systems since 2003, each advisory represents a full picture of the vulnerability in the product, including:

- Attack vector (*how the vulnerability can be exploited*)
- Secunia Research Criticality Rating
- Impact of exploitation (*the consequence*)
- References to industry standards
- Link to patches, description of partial fixes, work-arounds and other mitigation actions
- Additional references when applicable
- A unique identifier

Coverage of all applications and systems.

With one of the largest software vulnerability databases in the market, covering over 50,000 applications and systems across all platforms, we are committed to covering all applications our customers have in their environment. With the "Suggested Software" feature customers can suggest any commercially available application and we will start tracking it within 72 hours.

Comprehensive management features drive alerts, risk assessment, mitigation, verification and continuous reporting. Those features make the intelligence provided by Secunia Research actionable and link the steps of the Software Vulnerability Management lifecycle: Assess, Mitigate and Verify.

Reports and Dashboards support analyzing performance and give visibility to the implementation of information security strategies to management. Reports also provide deep insight into such processes for auditing and compliance check purposes.

And more...

Get Prioritized, Verified Vulnerability Alerts Across your Entire Infrastructure

The combination of the broad coverage, the intelligence provided by Secunia Research and the management features make it possible for organizations to assess risk based on the relative criticality of vulnerabilities in their own environment, driving the effective use of resources to prioritize mitigation actions with highest impact to reduce the attack surface for cybercriminals and hackers.

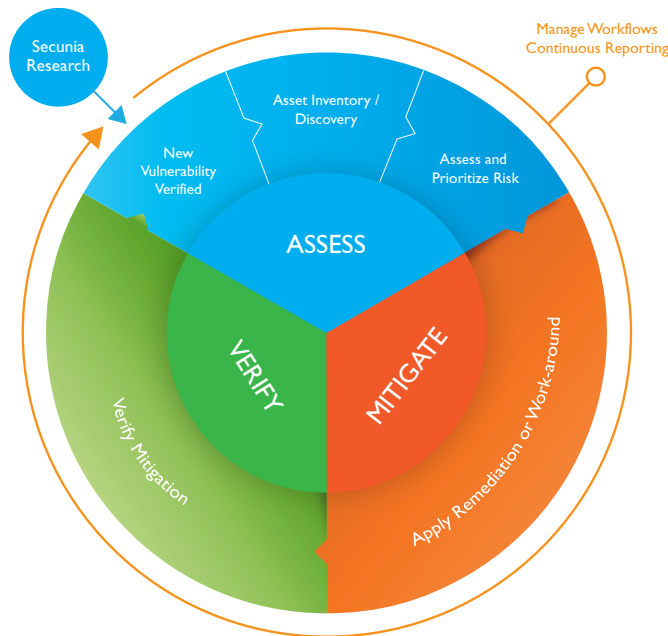

Figure 1: The Software Vulnerabilities Management lifecycle

How Vulnerability Intelligence Manager supports the Software Vulnerability Management lifecycle

Assess:

- Vulnerability information is verified and described
- Vulnerability Intelligence on applications running on hardware, firmware, middleware and Industrial Control Systems is sent to our customers
- Inventory data is used to configure asset lists, groups and alerts for correlation
- Vulnerability Intelligence is correlated with your inventory for assessment of vulnerability status of over 50,000 applications
- Vulnerability Intelligence and correlation allow to risk assessment, decision making and distribution of tasks

Mitigate:

- Secunia advisories contain information about existing mitigation actions, when available

Verify

- Ticketing system and reports to track and document risk assessment and implementation of mitigation actions

Secunia Research at Flexera Software

In September 2015, Flexera Software acquired Secunia, adding Secunia's Software Vulnerability Management solutions to complement Flexera Software's Software License Optimization and Application Readiness solutions. Under Flexera Software, Secunia Research continues to perform vulnerability verification, issue Secunia Advisories and publish data on the global vulnerability landscape.

About Flexera Software

Flexera Software helps application producers and enterprises manage application usage and increase the value they derive from their software. Our next-generation software licensing, compliance, security and installation solutions are essential to ensure continuous licensing compliance, optimize software investments and future-proof businesses against the risks and costs of constantly changing technology. Over 80,000 customers turn to Flexera Software as a trusted and neutral source for the knowledge and expertise we have gained as the marketplace leader for over 25 years and for the automation and intelligence designed into our products.
