GravityZone Datacenter Security with VMware® NSX

Bitdefender GravityZone Datacenter Security tightly integrates with VMware NSX to provide agentless protection, automated deployment and orchestration of security services for the software-defined datacenter.

A certified VMware Ready solution, GravityZone delivers the following benefits in NSX environments:

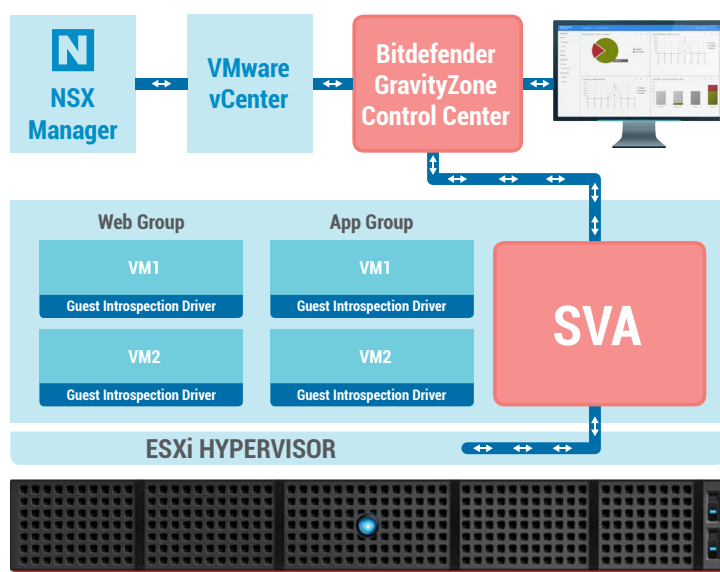

- **Improved security posture and automation with micro-segmentation and machine tagging** – The joint solution stops attacks from propagating by automatically tagging infected Virtual Machines (VMs) and moving them to a quarantine group
- **Increased consolidation rates with agentless protection** – With only one Security Virtual Appliance (SVA) per host and no additional security agent inside each VM, the joint solution increases virtualization density and improves application performance
- **Seamless support of VM portability** – GravityZone's tight integration with VMware NSX Manager ensures security policies automatically follow VMs as they migrate across the datacenter, delivering uninterrupted protection

Bitdefender GravityZone integrates with VMware vCenter and NSX Manager out of the box and uses guest introspection to provide agentless protection for VMs. Antimalware scanning is offloaded from the virtual machines to the Security Virtual Appliance (SVA). When new VMs are created within an NSX group, GravityZone provisions their security automatically.

The solution's lean and efficient architecture has a minimal footprint within the virtual machine, freeing resources to run production workloads. GravityZone's tight integration with VMware vSphere lets administrators assign and manage security policies directly from vSphere Web Client's familiar user interface.

"I am pleased with GravityZone's performance, efficacy and manageability that we have observed across Mentor Graphics' global VMware deployments."

BRIAN ALEXANDER
SENIOR CLOUD AND
VIRTUALIZATION ARCHITECT

PROTECT YOUR SOFTWARE-DEFINED DATACENTER WITH BITDEFENDER

- **Best-of-breed security** – GravityZone consistently ranks first in security efficacy and performance trials by the world's most respected independent testing organizations
- **Operational efficiency** – GravityZone's plug-and-play compatibility with VMware NSX allows the security platform to be provisioned and deployed within hours, not days. Its capacity to automate policy administration delivers substantial time savings on security operations
- **Unlimited linear scalability** – Engineered for the software-defined datacenter, GravityZone's modular and resilient architecture gives it scalability to secure carrier-grade deployments. The security platform scales out on demand in a linear and efficient fashion by spinning up additional security virtual appliances, as required
- **Single-pane-of-glass visibility** – GravityZone can simultaneously support any number of VMware vCenter servers plus other virtualization solutions in the same hypervisor-agnostic deployment. This provides ubiquitous visibility, manageability and reporting covering the entire software-defined datacenter—all from a single management console.

ABOUT BITDEFENDER GRAVITYZONE DATACENTER SECURITY

Engineered for the software-defined datacenter, the award-winning GravityZone Datacenter Security platform delivers best-in-class adaptive layered defenses while facilitating IT agility, operational efficiency and infrastructure cost containment. GravityZone tightly integrates with the VMware suite and is the only security solution certified as VMware NSX Ready for both Windows and Linux clients.
